

Customizable Subscription Box Scheduler

Agile Backlog — Epics & User Stories

SRN: PES1UG24AM297 | Student: Sushir C

Scenario No. 35 | Domain: Retail, E-Commerce & Finance

Target Actors: Subscriber, Fulfillment Lead

Backlog Summary

Epic	Story	Priority
Epic 1: Subscription Plan Management	Story 1.1: Browse Subscription Plans	High
	Story 1.2: Customize Box Contents	High
	Story 1.3: Pause or Cancel Subscription	Medium
Epic 2: Delivery Scheduling & Tracking	Story 2.1: Choose Delivery Date	High
	Story 2.2: Track Shipment Status	Medium
Epic 3: Fulfillment & Inventory Operations	Story 3.1: View Upcoming Orders	High
	Story 3.2: Low-Stock Alerts	Medium
Epic 4: Billing & Payment Handling	Story 4.1: Update Payment Method	Medium
	Story 4.2: Failed Payment Notifications	Medium

Total: 4 Epics, 9 User Stories, 40 Story Points

Sprint Plan

Sprint 1 (19 pts): Story 1.1, 1.2, 1.3, 2.1, 3.1

Sprint 2 (21 pts): Story 2.2, 3.2, 4.1, 4.2

Epic & User Story Details

Epic 1: Subscription Plan Management

Description: Enables subscribers to choose, customize, and manage their recurring box plans.

Story 1.1: Browse Subscription Plans

Priority: High | Story Points: 3

As a **Subscriber**

I want to **browse available box plans (Monthly, Quarterly)**

So that **I can choose one that fits my needs**

Story 1.2: Customize Box Contents

Priority: High | Story Points: 5

As a **Subscriber**
I want to **customize the contents of my box**
So that **I only receive items I like**

Story 1.3: Pause or Cancel Subscription

Priority: Medium | Story Points: 3

As a **Subscriber**
I want to **pause or cancel my subscription**
So that **I have control over billing**

Epic 2: Delivery Scheduling & Tracking

Description: Enables scheduling, rescheduling, and tracking of box deliveries.

Story 2.1: Choose Delivery Date

Priority: High | Story Points: 3

As a **Subscriber**
I want to **choose my preferred delivery date**
So that **the box arrives when I'm available**

Story 2.2: Track Shipment Status

Priority: Medium | Story Points: 5

As a **Subscriber**
I want to **track my shipment status**
So that **I know when to expect delivery**

Epic 3: Fulfillment & Inventory Operations

Description: Enables the Fulfillment Lead to manage stock and prepare boxes for shipment.

Story 3.1: View Upcoming Orders

Priority: High | Story Points: 5

As a **Fulfillment Lead**
I want to **view upcoming orders by delivery date**
So that **I can plan packing schedules**

Story 3.2: Low-Stock Alerts

Priority: Medium | Story Points: 8

As a **Fulfillment Lead**
I want to **receive low-stock alerts for popular items**
So that **I can reorder in time**

Epic 4: Billing & Payment Handling

Description: Enables automated recurring billing for subscriptions.

Story 4.1: Update Payment Method

Priority: Medium | Story Points: 3

As a **Subscriber**

I want to **update my payment method**

So that **my subscription doesn't get interrupted**

Story 4.2: Failed Payment Notifications

Priority: Medium | Story Points: 5

As a **Fulfillment Lead**

I want to **see failed payment notifications**

So that **I can hold shipment until resolved**

Answer to the Reflection questions

1. Did your estimations reflect the actual effort?

For the most part, yes. Story points were assigned relative to perceived complexity rather than fixed time — simpler, well-understood tasks like "Browse Subscription Plans" or "Choose Delivery Date" were scored at 3 points, while stories involving more logic or integration, like "Low-Stock Alerts" (8 points) or "Track Shipment Status" (5 points), were scored higher due to added uncertainty. Since no actual development took place (this was a simulation), we can't fully validate the estimates against real implementation time, but the relative sizing between stories was internally consistent.

2. Was your backlog well-prioritized?

Yes. Priorities were set based on user impact to the core workflow. Stories central to the primary user journey — subscribing, customizing a box, and scheduling delivery — were marked High priority, since a Subscriber can't get value from the app without them. Supporting stories like payment notifications and low-stock alerts were set to Medium, since they matter operationally but don't block the core experience.

3. How did your simulated sprint align with your plan?

The plan was to split the 40-point backlog across two sprints (19 points in Sprint 1, 21 in Sprint 2). Sprint 1 ended with a mix of Done, In Progress, and To Do items rather than everything fully completed — which mirrors a realistic outcome, since teams often carry some unfinished work into the next sprint rather than completing 100% of planned scope.

4. What insights did the burndown chart give about your team's capacity?

The main insight was about the tool's behavior rather than team velocity: since the whole backlog, sprint, and status changes were created within a single calendar day, Jira's burndown chart only had one day of data to plot, producing a steep vertical drop instead of a gradual, multi-day slope. In a real sprint spread across a full week, the same task movements would show up as an incremental decline against the ideal guideline, making it possible to judge whether the team is ahead or behind pace. This showed that burndown charts are only meaningful when sprint work is genuinely distributed over time — a compressed, one-day simulation doesn't reflect true team capacity or pacing.
